

Lead

Following are examples of materials that may contain lead:

- Batteries, roof flashing, piping, bridge bearing plates/gaskets and lead-based paint separated from a structure.
- Materials coated with lead-based paint firmly attached, such as building siding, do not require any special handling and may be disposed of as solid waste or demolition material.

Disposal and Recycling Requirements

- Lead paint chips generated from scraping or mechanical devices must be managed and disposed of as hazardous waste.
- Lead bearing plates, lead pipes, and any lead bearing materials other than paint chips shall be recycled by a lead scrap recycler.
