

## **Refrigerants**

Common refrigerants used in appliance compressors include, but are not limited to, the following: chlorofluorocarbon (CFC), hydro chlorofluorocarbon (HCFC) and hydrofluorocarbon (HFC). Appliances that may contain refrigerants include air conditioners, drinking fountains, dehumidifiers, refrigerators and freezers.

### *Refrigerant Equipment Attached to a Building or Other Structure*

- Refrigerants must be removed from the equipment by an EPA Section 608-certified refrigerant contractor before removing the equipment from the structure, regardless of whether the equipment will be disposed of or reused.

### *Refrigerant Equipment Unattached to a Building or Other Structure*

Unattached CFC equipment can be treated as white goods (see guidance below on white goods).
