

MAP ACCURACY REPORT
Countywide Imagery & DEM
Blue Earth County

Data Contact Person:	Charles Berg	Department:	IT Office
Type of Mapping:	DEM (LiDAR) & Ortho	Contractor:	Optimal Geomatics, Inc.
Independent Testing:	Mn/DOT Photo Unit	Contract Delivery date:	7 Dec. 2005

The purpose of this report is to independently test orthophotos and LiDAR derived digital elevation model data that was contracted for by Blue Earth County. This project consisted of flights flown on 13 & 14 April 2005 for aerial acquisition and on 13, 14, 15, 23 & 24 April 2005 using Light Detection and Ranging (LiDAR) and GPS/IMU technologies. The photographic flights were controlled using ground targets and by the GPS/IMU equipment onboard the aircraft. The specific equipment used for the aerial imagery collection was a Cessna 208B Grand Caravan plane, a Leica RC30 camera, serial number 5296, calibration date 27 March 2003. For the aerial-triangulation, ISAT software was used and for the measurement and production a Z/I ImageStation softcopy stereoplottor. The specific equipment used for the DEM acquisition was the same plane with an Optech 3100 ALTM 70 kHz. laser system and Realm Terrascan (Terrasolid), Geocue (NIIRS10) Survey processing software. The preflight mission was scheduled so that photography and LiDAR were collected on the same mission and flown at 1836 meters AGL. The flights were controlled using Trimble GPS receivers on the ground and by LN200 GPS/IMU equipment in the aircraft. Optimal Geomatics, Inc., formally known as MD Atlantic Technologies, Inc. before delivery, eliminated that portion of the data set that did not come in contact with the ground surface. There was no additional file manipulation or filtering done by Blue Earth County or Mn/Dot.

The vertical Datum used was the North American Vertical Datum of 1988 (NAVD 88) and the Horizontal Datum used was the North American Datum of 1983 (NAD 83). The products were delivered in the Blue Earth County Coordinate System, NAD 83 (1996 adj.) The Geoid model used was the GEOID 03. This LiDAR portion of the project was approximately 506,695 acres in area.

ORTHOPHOTO

EAST BOUNDING COORDINATE: 93° 45' 46.80799" W. Long.
WEST BOUNDING COORDINATE: 94° 22' 24.79958" W. Long.
NORTH BOUNDING COORDINATE: 44° 16' 13.56407" N. Lat.
SOUTH BOUNDING COORDINATE: 43° 50' 39.16066" N. Lat.

DEM

EAST BOUNDING COORDINATE: 93° 45' 51.92557" W. Long.
WEST BOUNDING COORDINATE: 94° 22' 24.78657" W. Long.
NORTH BOUNDING COORDINATE: 44° 16' 07.11676" N. Lat.
SOUTH BOUNDING COORDINATE: 43° 50' 42.96403" N. Lat.

Geodetic monumentation used to control this project was published by Mn/DOT and can be found in the geodetic database online at www.olmweb.dot.state.mn.us. Optimal Geomatics, Inc., its consultant, Bolton & Menk and Mn/DOT's District 7 Surveys report using the monumentation that is labeled as the Blue Earth County Ground Control Point List and is part of this report. In addition 2 CORS stations *MKTO* & *LESU* were used.

Optimal Geomatics, Inc. delivered the LiDAR and ortho-photos on a portable hard drive in MicroStation V8 format and the transmittal. The tiling scheme maps for both products are included as part of electronic file package.

The overall project area encompasses the entire county with flight strips extended to include the City of North Mankato. This additional data had not been processed and was not part of what Mn/DOT was asked to test.

The vertical accuracy test done for the DEM portion of this project were a direct comparison of the field surveyed elevations and the elevations derived from Geopak TIN model created from the LiDAR data at the surveyed X,Y coordinates. The contract called for 3.6' or 1.10m pre-process spacing as a deliverable product.

The horizontal accuracy test done on the orthophotos were a direct comparison of field surveyed features on the ground, such as sidewalk intersections, to the closest pixel location that an experienced technician could find. There is a certain amount of personal bias involved in this type of testing, knowing this, when the operator selected a pixel that was outside of the norm, a second technician was asked to see if they could replicate the results. The contract called for a 1" = 200 feet, 6" pixel size orthophoto to National Map Accuracy Standard (NMAS). The NMAS was and often is still used as the standard for testing hard copy or paper maps, whereas digital data is tested against the current National Standard for Spatial Data Accuracy (NSSDA). The NSSDA for the horizontal (R) component or the combined X and Y coordinate for this project are:

<u>Photo Identifiable Points</u>	<u>RMSE_r</u>	<u>NSSDA (Horizontal)</u>
Urban Areas Only	0.61'	1.06' with 43 points

The test data was obtained by District 7 Survey personnel throughout the project area encompassing different ground cover types per the American Society for Photogrammetry and Remote Sensing (ASPRS) Guidelines for Vertical Accuracy Reporting for LiDAR Data, May 2004. The test data itself was collected by RTK methods and each test point was collected twice to ensure that the independent test source was at least 3 times as accurate. The MultiShot program was utilized for comparing the two independent test points and is a part of this report. When applying the test data to the elevation model produced the accuracy test results indicated below. In addition, Mn/DOT had several projects that were scheduled for surveys within Blue Earth County at the time of photography or shortly after and these projects were for US 14 between Mankato and Eagle Lake, TH 30 in Mapleton and the Mn/DOT Truck Station at the southeast edge of Mapleton. Survey information from two of these projects were collected by consultants and although Mn/DOT contract specifications require the same survey collection procedures, the documentation is in the form of proprietary survey files and are attached to this report. Although the test points were not as widely distributed as the horizontal test points they do give the user two specific examples of the performance of the DEM in rural and urban areas, these two cover types along with hydraulic features were the main concerns by county employees.

The National Standard for Spatial Data Accuracy (NSSDA) for the vertical (Z) component of the DEM by ground cover/type for this project is:

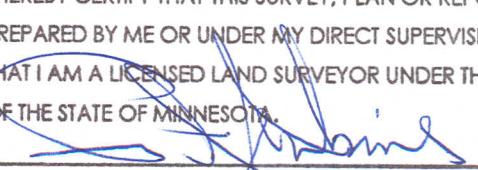

<u>Ground Cover/Type</u>	<u>NSSDA (Vertical)</u>	<u>Chi Square Test Pass / Fail</u>
Open Terrain – L1O	0.78' with 203 points.	Pass
Tall Weeds & Crops – L2T	0.82' with 41 points.	Pass
Brush Lands & Low Trees – L3B	0.55' with 13 points.	Pass
Forested Areas with Canopy – L4F	Not Tested	N/A
Urban Areas with Structures – L5U	0.64' with 93 points.	Pass
All Ground Cover	0.79' with 350 points.	Pass

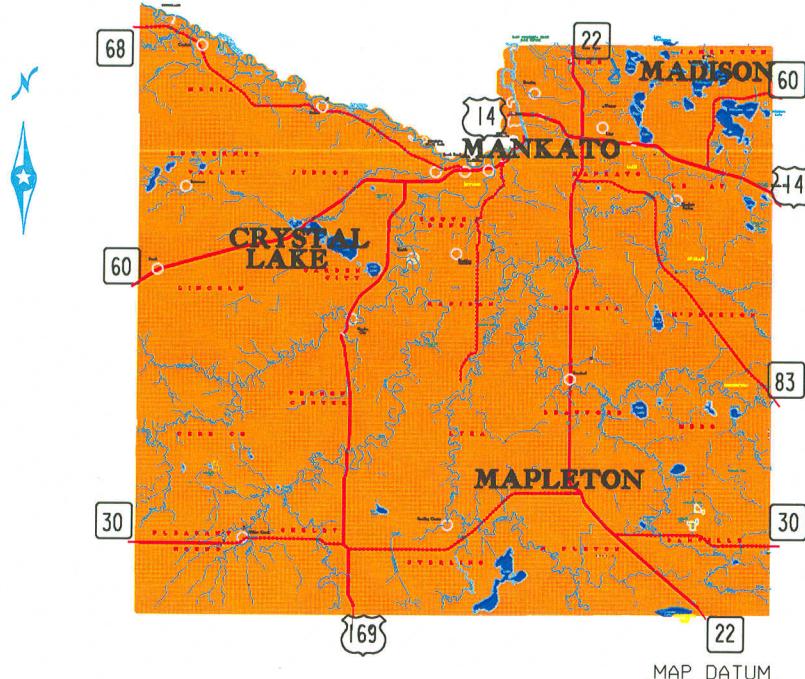

The horizontal accuracy of the DEM was not tested as part of this project due to the fact that the model does not contain distinct or well-defined topographical features but the expected horizontal accuracy as stated by the laser manufacturer is 1/2000th of the flying height which calculates to 3.0 feet. The outcome of the vertical testing results suggests that the horizontal accuracy is better than that claimed by the manufacturer.

The tabulated test results, correspondence, related notes and hard copies are attached to this report.

S.P.: BLUE EARTH LiDAR
T.H.: 169

COLLECTION DATE : 13-24 April 2005
LOCATION : BLUE EARTH COUNTY LiDAR
MAPPING : LiDAR
CONSULTANT MAPPING : YES
MAPPING COMPLETED : 7 December 2005
ARCHIVE INFO : (651) 296-1081
ARCHIVE TAPE : J:\ARC\LiDAR\ 2005F\ BLUE EARTH LiDAR

MAP DATUM
The vertical datum of the TIN file associated with this map is based on the North American Vertical Datum of 1988 (NAVD 88).

The horizontal datum of this map is based on Blue Earth county coordinate system which is related to the Minnesota state plane coordinate system NAD 1983 (HARN 1996) adjustment south zone.

MAP ACCURACY

The vertical accuracy of the TIN file associated with this map has been tested using NSSDA (June 1998) methods and computes to 0.79 FT. based on 350 test elevations.

The horizontal accuracy of the Orthophoto has been tested using NSSDA (June 1998) methods and computes to 1.06 FT. based on 43 test points.

MEMORANDUM OF UNDERSTANDING
between
MINNESOTA DEPARTMENT OF TRANSPORTATION
and
BLUE EARTH COUNTY

WHEREAS, the Minnesota Department of Transportation (Mn/DOT) and Blue Earth County wish to enter into agreement to exchange services with respect to County wide digital orthophotography and LiDAR derived digital elevation model (DEM) in Blue Earth County.

NOW, THEREFORE, Mn/DOT and Blue Earth County state the following:

1. This Memorandum of Understanding (MOU) is not a binding agreement, and any binding obligation will be made with written, properly executed and approved agreements.
2. Blue Earth County will provide Mn/DOT with a copy of the digital data that the county acquired in the spring of 2005 by Optimal Geomatics, Inc.
3. A meeting will be scheduled that include representative from Mn/DOT's Photogrammetric Unit, District Seven and Blue Earth County to decide the number and location of survey shots that are necessary to adequately test the orthophotography. (approximately 40 to 80 shots will be needed)
4. Mn/DOT will do the surveying and processing of these test shots and will be collected using the ASPRS Vertical Accuracy Reporting Guidelines.
5. A sample of Mn/DOT's Map Accuracy Report will be shown to Blue Earth County for their approval.
6. Mn/DOT will do the accuracy testing and write a report detailing the outcome of the test shots. A copy of the report will be provided to Blue Earth County in any format requested.
7. The digital data provided by the County was developed pursuant to Minnesota Statutes §375.85. Mn/DOT is a licensee of such data only, and will have no ownership interest in the data. Pursuant to Minnesota Statutes §§375.86 and 13.37 (subd. 2), such data is classified as non-public "trade secret data". Mn/DOT will not disclose such data unless otherwise required by law or court order.

From: "William White" <bwhite@tier3-inc.com>
To: "Peter Jenkins" <peter.jenkins@dot.state.mn.us>
Date: 5/17/05 10:37AM
Subject: 5/24 meeting

Hi Peter - I've got the County signed up for 9:00 am on Tuesday. It will be Paul Schmitt, Charlie Berg, and myself - you and Steve Jobe (if you bring him with.)

I'd like to get your thoughts on the content of the MOU - specifically, what the MNDOT "scope of work" would be - a description of the work activities, quantities, accuracies, and deliverables - number of points to be confirmed, a brief description of the work that involves, the level of accuracy deemed acceptable by MNDOT (and the county), description of the report, etc. - those are the kind of thing I really don't have any expertise in. I'll work with the County on their component - I'm thinking mostly restrictions on use - are there other things they should be focusing on? Are their County resources or input that you need?

Let me know - thanks - look forward to seeing you next week.

Bill

Subject: RE: 5/24 meeting

Hi Peter -- Here is the basic info on the deliverables -- let me know if you need more specificity.

The ortho deliverables will be .5' pixel, 1" = 200', approx. 1" = 1000" negative scale, color, uncompressed tiffs or geotiffs, and companion SIDs.

LiDAR deliverables will probably be ascii 3D Gen (ESRI) files -- point cloud should be about 3.5' to 5' spacing, and of sufficient density to create 2' contours.

They are doing a pilot area in the north central part of the County -- around the suburban area where the MN River starts heading north from Mankato. Ortho and LiDAR deliverables for the pilot should be middle of June.

Intended use -- primary is for annual tax map production, which is an overlay of their parcel base (microstation now, ArcGIS later)-- don't know yet if that is going to be ad hoc or if they'll do a full run early next year.

Environmental services(ES)will be the primary initial beneficiary of the LiDAR -- probably in-house creation of contours for flood plains, riparian areas, landfill, wetlands, etc. ES is also responsible for maintenance of street centerlines, and those will probably be re-digitized or otherwise edited to register with the new orthos.

City of Mankato has a need for new contours in about 90 sq. miles of the northeast section of the City, and the County will be looking to negotiate a deal with them.

Tertiary users will be ditch management contour creation (probably shape files or geomedia .mdb); highway ortho and contour pre-design activities (primarily microstation); public safety will want access to new orthos (MapInfo/SID's).

I've forwarded the draft MOU to Paul Schmitt, and will give it some thought before we meet. Look forward to Tuesday.

Bill

Subject: Re: 5/24 meeting

Bill:

Steve and I are playing telephone tag, but he would like to attend. One of a few questions that I will need to have answered involve the deliverables. Without knowing what the nature of the data is, its hard to know if Mn/DOT's expectation is the same as Blue Earth County's. If

our expectations are similar then a simple MOU would do. If not then we may have to be more specific in our language so that we all walk away feeling good.

An example of what I'm looking for would be the pixel resolution of the ortho, this is important because it will determine the directions Steve gives to his crews as to what test points are needed. Pixel resolution will also determine the accuracy expectations, if the pixel resolution is 2 foot then a accuracy expectation of 6 inches is unreasonable. Something in the range of 4 to 10 feet would be a realistic outcome.

There are similar issues with what platform the county intends to run this data on. A data set that we received from one county where we were not involved up-front, delivered data that was tremendously large and it has caused issues with our CADD machines. We are doing a work around and this is causing some stress on the part of our district client who now want to use this data. I'll also want to know what the county's intended use for this data is, these are important metadata questions which also help in determining the procedure for testing.

I think that the MOU I sent you previously is similar to the one the county signed for the Monument Densification Project. The County Engineer signed that particular one so he is familiar with the process but the IT folks might not be. We certainly can do some adjustments to it at the meeting. Just so that you have a copy of what I have so far, here it is.

Pete

Subject: Blue Earth County QC

I took over Paul Schmitt's position here at Blue Earth County in June and I wanted to touch base with you. I have some notes about Mn/DOT doing a quality control check on our data that mentioned your name but they don't have any kind of timeline for the project. If I could get an update on where things are at and maybe a projected completion date that would help me plan some things out here. If there is anything you need from me just let me know.

Thanks,

Darrin Haeder

Subject: Confirmation: Blue Earth County Data

This is just to confirm the action items from our conference call this morning.

1. Mike will pull the photos off the USB hard drive, then send it to Steve Ashbee probably Monday or Tuesday of next week.
2. OptimalGeomatics will get started now with the plan outlined below.
3. Once Optimal is finished and has received the USB hard drive, they will put the V8 files on the drive and send it back to Mike and Pete at MnDOT.

Let me know if there are any corrections to the above action items.

Thanks for all your help with this!

Charlie

Charlie,

I believe this is a good solution. It puts the onus on us to ensure the V7 files are as conducive to translation to V8 as they can be to start with. Also, if we do the translation, we will identify any issues encountered and document the solutions for future reference. As long as we're translating to V8, we will go ahead and add the V8 set as a final deliverable to Blue Earth County as well. Sooner or later more MicroStation V8 users will want to access the data anyway.

Steve

Subject: Blue Earth County Data

Charlie:

This is a followup on the e-mail sent regarding our discovery of converting V7 files to V8 within MicroStation. It would be my preference to use the files directly from Optimal Geomatics and not have to do an English-metric conversion. Don't get me wrong, we are fully capable of making this conversion but there are issues involved. As a surveyor, without knowing every parameter and definition there is a chance that errors could occur over a data set as large as yours. Small errors are not noticeable in small data sets but may become noticeable when large areas are concerned.

My proposed solution would be for me to send your portable hard drive directly to Steve Ashbee. Have him load the same files he is re-sending you and ship them directly to me (I'll pay for shipping). This way I am testing the same files you were delivered. This is in the interest of safety so errors can be avoided.

Thanks

Pete

Peter,

Thanks for your help and support. As far as the time frame goes, I can make sure expectations are in line at Blue Earth County. We will be delivering digital orthos for Mankato and adjoining TWP's to the north and east over the next two weeks. By the end of October we will have about 1/2 of the county delivered.

From what you are telling us, a countywide rectification of their Tax Maps will likely need to involve a combination of Section Corner controls and photo-identifiable property corners that we can get from the orthos.

Once again, thanks for your generosity in this matter. It's a big help to us and Blue Earth County.

P.S. You must've been looking at September. Oct. 27th is a Thursday!!

Regards,

Steve

Steve:

I have made arrangements to go to Mankato on Tuesday, 27 Oct. 05. Steve Jobe took a job as the County Surveyor for Wright County and the Mankato DOT has a void in their surveyor position right now. I'm afraid that due to my schedule that the 27th is the best that I can do. I think that with this one trip that I can get everything that is available. Keep in mind that Blue Earth does not have a County Surveyor and there is no requirement to supply coordinates as part of Certificate of Location of Government Corner, which are required. If there are recorded certificates that cover 30% of the county I'd be supervised and of those that have coordinates I guess will be less than half. I'll do my best to check every source and you'll get what ever I can find.

Pete

Peter,

We would eventually be looking for Section Corners throughout the county, however, the pilot area, Mankato TWP would be first priority and we would like to get that information as soon as we can.

Following testing and determining expectations with respect to the rectifications, we plan to design a workflow that will output a suitable

product. At that point we would need any remaining Section Corners available throughout the County. I suspect it would be at least December before conclusions are drawn from the Pilot Area test.

Steve

Steve:

To answer your question, yes there is information and yes I can get you some of it. First, are you looking for just the pilot area or the entire county? Secondly, I could go looking through the files for section corner coordinate information but it would end up being a "hodge podge" of information from many different sources, including the private sector. Third, how soon do you need this information?

Pete

Pete,

We have been asked to conduct a small test by Blue Earth County. They are interested in rectifying their Tax Maps to improve their geospatial accuracy and make them compatible with their new Digital Orthophoto base in the Blue Earth Coordinate System. The first step in the test will be to see what kind of results are available by simply anchoring their Section Corners to the correct coordinates.

Julie Roisen is the interested party at Blue Earth. She shared with us that the DOT had access to a considerable number of surveyed Section Corners in Blue Earth County which could be made available to us. If this is in fact the case could you provide us with or direct us to that data?

Regards,

Steve

Subject: Re: Blue Earth County Planner

Dan,

I talked to Scott Salsbury in BE Co. Environmental Services.

The project is being coordinated in the county IT department.

The county has hired a consultant (TR3) to review technology needs, uses, etc. and they are partnering(?) on this project.

The Blue Earth County contact name and number:

Paul Schmidt 507-389-8159

Project will include new Orthophotos and information to create a Digital Elevation Model.

Request for proposals will go out this winter. Though they have talked to a couple of vendors about other things.

Have a great day!!

Rebecca

Hi Rebecca,

How are you? Are you ready for the weekend? I suppose you will be taking some time off next week to extend your long weekend up North?

The reason for this note is, Pete Jenkins heard that Blue Earth County is creating a DEM of the whole county, and he wanted to talk to the person responsible, as he is interested in Partnering with them. Pete said this project is being coordinated by the Blue Earth County Planner, but he didn't know her name. Do you know who the planner is? Or, could you find out someway/how? I have a meeting from 9:00 am - 12:30 pm, so you won't be able to reach me until sometime this afternoon. Thanks!

Dan

APPENDIX A

NMAS Equivalent Contour Interval	NSSDA RMSE(z)	NSSDA Accuracy (z)	Required Accuracy for Reference Data for "Tested to Meet"
0.5	0.15 ft or 4.60 cm	0.30 ft or 9.10 cm	0.10 ft
1	0.30 ft or 9.25 cm	0.60 ft or 18.2 cm	0.20 ft
