

**MAP ACCURACY REPORT**  
**Countywide Imagery & DEM**  
**McLeod County**

<b>Data Contact Person:</b>	Christy Christenson	<b>Department:</b>	GIS Director
<b>Type of Mapping:</b>	DEM (LiDAR) & Ortho	<b>Contractor:</b>	Optimal Geomatics, Inc.
<b>Independent Testing:</b>	Mn/DOT Photo Unit	<b>Contract Delivery date:</b>	19 Dec. 2007

The purpose of this report is to independently test orthophotos and LiDAR derived digital elevation model data that was contracted for by McLeod County for horizontal and vertical accuracy. This project consisted of flights flown on 28 April, 1 & 2 May 2007 for aerial imagery acquisition and on 2, 9, 10, 11, 12, 14, & 17 May 2007 using Light Detection and Ranging (LiDAR) and GPS/IMU technologies. A supplemental acquisition flight was necessary and took place on 23 & 25 October 2007. The photographic flights were controlled using ground targets and by the GPS/IMU equipment onboard the aircraft. The specific equipment used for the aerial imagery collection was a Cessna 208B Grand Caravan plane, a Leica RC30 camera, serial number 5296, calibration date 27 March 2003. A copy of the calibration report is included in this report. For the aerial-triangulation, ISAT software was used and for the measurement and production a Z/I ImageStation softcopy stereoplottor. The specific equipment used for the DEM acquisition was the same plane with an Optech 3100 ALTM 70 kHz. laser system, serial number 04SEN155 and Realm Terrascan (Terrasolid), Geocue (NIIRS10) Survey processing software. The preflight mission was scheduled so that photography was flown at 5000 feet AGL and LiDAR were collected and flown at 2788 feet AGL. The flights were controlled using Leica System 500 GPS receivers on the ground and by LN200 GPS/IMU equipment in the aircraft. Optimal Geomatics, Inc. eliminated that portion of the data set that did not come in contact with the ground surface. There was no additional file manipulation or filtering done by McLeod County or Mn/Dot.

The vertical Datum used was the North American Vertical Datum of 1988 (NAVD 88) and the Horizontal Datum used was the North American Datum of 1983 (NAD 83). The products were delivered in the McLeod County Coordinate System, NAD 83 (1996 adj.) The Geoid model used was the GEOID 03. The Ortho and LiDAR portions of this project contain approximately 375,344 acres in area each.

**ORTHOPHOTO**

EAST BOUNDING COORDINATE: 93° 57' 34.93239" W. Long.  
WEST BOUNDING COORDINATE: 94° 31' 03.37855" W. Long.  
NORTH BOUNDING COORDINATE: 44° 59' 27.17488" N. Lat.  
SOUTH BOUNDING COORDINATE: 44° 37' 12.11588" N. Lat.

**DEM**

EAST BOUNDING COORDINATE: 93° 57' 34.93239" W. Long.  
WEST BOUNDING COORDINATE: 94° 31' 03.37855" W. Long.  
NORTH BOUNDING COORDINATE: 44° 59' 27.17488" N. Lat.  
SOUTH BOUNDING COORDINATE: 44° 37' 12.11588" N. Lat.

Geodetic monumentation used to control this project was published by Mn/DOT and can be found in the geodetic database online at [www.olmweb.dot.state.mn.us](http://www.olmweb.dot.state.mn.us). Data sheets, as reported by Optimal Geomatics, Inc. and Bolton & Menk, Inc. are attached to this report. Mn/DOT's District 8 Surveys report using the VRS system.

Optimal Geomatics, Inc. delivered the LiDAR and ortho-photos on a portable hard drive in MicroStation V8 format and the transmittal. The tiling scheme maps for both products are included as part of electronic file package.

The overall project area encompasses the entire county with flight strips extended to include portions of the Buffalo Creek Watershed.

The vertical accuracy test done for the DEM portion of this project were a direct comparison of the field surveyed elevations and the elevations derived from Geopak TIN model created from the LiDAR data at the surveyed X,Y coordinates. The contract called for 3.6' or 1.10m pre-process spacing as a deliverable product.

The horizontal accuracy test done on the orthophotos were a direct comparison of field surveyed features on the ground, such as sidewalk intersections, to the closest pixel location that an experienced technician could find. There is a certain amount of personal bias involved in this type of testing, knowing this, when the operator selected a pixel that was outside of the norm, a second technician was asked to see if they could replicate the results. The contract called for a 1" = 200 feet, 6" pixel size orthophoto to National Map Accuracy Standard (NMAS). The NMAS was and often is still used as the standard for testing hard copy or paper maps, where as digital data is tested against the current National Standard for Spatial Data Accuracy (NSSDA). The NSSDA for the horizontal (R) component or the combined X and Y coordinate for this project are:

<u>Photo Identifiable Points</u>	<u>RMSE<sub>R</sub></u>	<u>NSSDA (Horizontal)</u>
Urban Areas Only	0.74'	1.28' with 69 points

The test data was obtained by District 8 Survey personnel throughout the project area encompassing different ground cover types per the American Society for Photogrammetry and Remote Sensing (ASPRS) Guidelines for Vertical Accuracy Reporting for LiDAR Data, May 2004. The test data itself was collected by RTK methods for each cover type except the forested area where a total station was used. Each test point was collected twice to ensure that the independent test source was at least 3 times as accurate. The MultiShot program was utilized for comparing the two independent test points and is a part of this report. When applying the test data to the elevation model produced the accuracy test results indicated below. District 8 Surveys selected test points that geographically represent the various cover types as well as the general layout of the county.

The National Standard for Spatial Data Accuracy (NSSDA) for the vertical (Z) component of the DEM by ground cover/type for this project is:

<u>Ground Cover/Type</u>	<u>RMSE<sub>Z</sub></u>	<u>NSSDA (Vertical)</u>
Open Terrain – L1O	0.22'	0.43' with 40 points.
Tall Weeds & Crops – L2T	0.33'	0.64' with 20 points. *
Brush Lands & Low Trees – L3B	0.25'	0.50' with 20 points.
Forested Areas with Canopy – L4F	0.46'	0.91' with 20 points. *
Urban Areas with Structures – L5U	0.27'	0.53' with 20 points. *
All Ground Cover	0.30'	0.60' with 120 points.

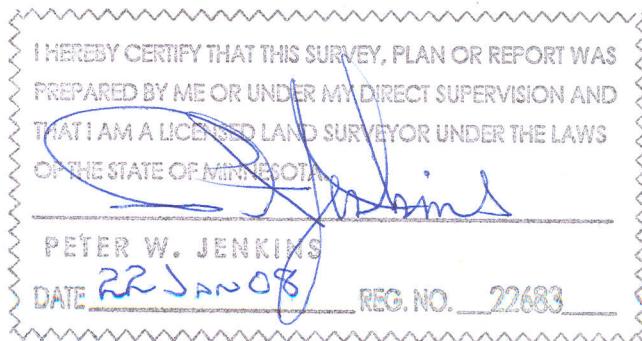

\* Certain test points in this category fell outside of the norm and were reported to the contractor for further inspection and review of data and procedures. The contractor provided me a response and is included in this report.

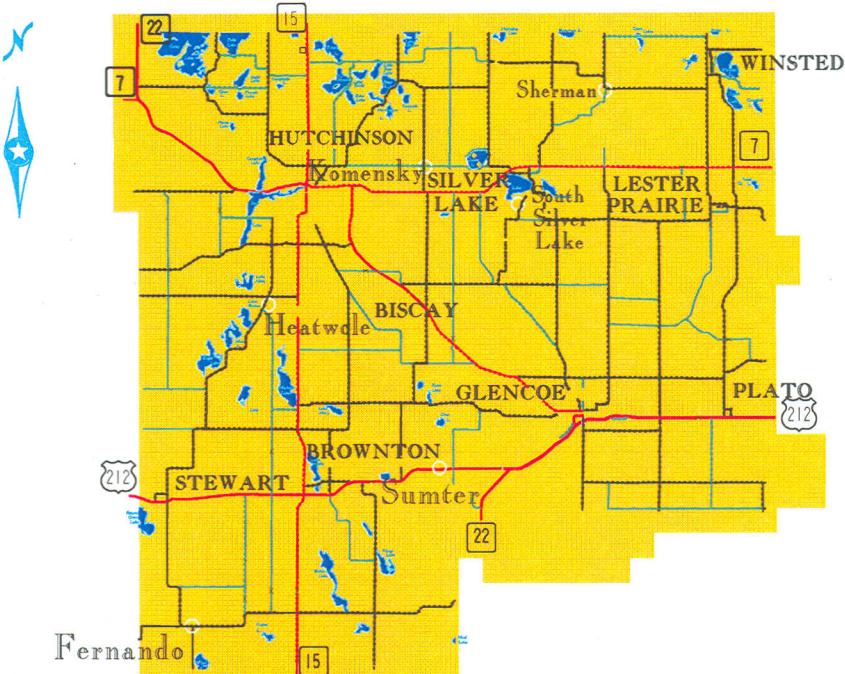

The horizontal accuracy of the DEM was not tested as part of this project due to the fact that the model does not contain distinct or well-defined topographical features but the expected horizontal accuracy as stated by the laser manufacturer is 1/2000<sup>th</sup> of the flying height which calculates to 3.0 feet. The outcome of the vertical testing results suggests that the horizontal accuracy is better than that claimed by the manufacturer.

The tabulated test results, correspondence, related notes and hard copies are attached to this report.

#### MAP DATUM

S.P.: MCLEOD COUNTY LIDAR  
T.H.: TH 212

COLLECTION DATE : 07

LOCATION : MCLEOD COUNTY

MAPPING : LIDAR

CONSULTANT MAPPING : YES

MAPPING COMPLETED : 01-23-08

ARCHIVE INFO : 651.366.3457

ARCHIVE TAPE : J:\ARC\LiDAR\ 2007-S\ MCLEOD COUNTY

The vertical datum of the TIN file associated with this map is based on the North American Vertical Datum of 1988 (NAVD 88).

The horizontal datum of this map is based on McLeod county coordinate system which is related to the Minnesota state plane coordinate system NAD 1983 (HARN 1996) adjustment south zone.

#### MAP ACCURACY

The vertical accuracy of the TIN file associated with this map has been tested using NSSDA (June 1998) methods and computes to 0.60 FT. based on 120 test elevations.

The horizontal accuracy of the orthophoto has been tested using NSSDA (June 1998) methods and computes to 1.28 FT. based on 69 test points.

Pete,

Attached is an excerpt that deals with the testing and our review at the 7 points.  
Please give it a read and let me know if you are OK with it.

Steve

#### Spatial Accuracy Testing by Minnesota Department of Transportation (MNDOT)

Third-party data spatial accuracy testing of the output mapping data was performed by MNDOT. Orthophotography was tested by selecting features which can be readily and accurately identified on the orthophotography and comparing their X, Y coordinates with those observed using a field survey methods. Topographic mapping was tested using RTK and total-station methodologies. Five different categories of land cover throughout the County were tested. These included:

L1O - Open areas; plowed fields, low grass, lawns, & other un-obsured bare-earth surfaces

L2T - Tall grass & weeds; longer grasses, crops, weedy areas, low mixed vegetation

L3B - Brush; Brush and bushes, low scattered trees

L4F - Forest; Forest and wooded areas, woodlots

L5U - Urban; Areas with an abundance of man-made structures

The field collected elevations were then compared to surface elevations interpolated from the DEM (Digital Elevation Model) or TIN (Triangular Irregular Network). The TIN was derived by combining the supplied bare-earth classified LIDAR returns and breaklines compiled from LIDAR synthetic stereo pairs.

Testing for both orthophotography and topographic mapping came up positive, meeting or exceeding the targeted accuracy standards.

#### Orthophotography Test Results:

The targeted accuracy for orthophotography was to meet 1"=100' ASPRS Class 1 Standards for Large-Scale Mapping. (Horizontal) This is quoted in terms of maximum allowable RMSE (Root Mean Square Error) in X or Y of 1'. Equivalents given in RMSE<sub>r</sub> and NSSDA 95% confidence.

	RMSE in X or Y	RMSE <sub>r</sub>
NSSDA - 95% Confidence		
Target Accuracy	1'	1.414'
	1.45'	
Tested Accuracy	0.52'	0.74'
	1.28'	

The results came in exceeding the targeted accuracy. No test points were selected for review.

#### DEM Data Test Results:

The targeted accuracy for topographic mapping was to meet ASPRS Class 1 Standards for Large-Scale Mapping with 1' contours. This is quoted in terms of maximum allowable RMSE (Root Mean Square Error) 1/3 of the contour interval. Equivalent is also provided expressed in terms of NSSDA 95% confidence level.

	RMSE in el.	NSSDA - 95% Confidence
Target Accuracy	0.33'	0.65'
Tested Accuracy	0.30'	0.60

None of the test points differences exceed one contour interval (1'). Of the

one-hundred and twenty (120) test points, seven (7) test points exhibiting the highest deltas were selected for review in order to determine whether any procedural or systematic issues were affecting the data set. Of the seven points selected, one was classified as L2T, five as L4F and one as L5U. Following review of the data set, observations at the selected locations were as follows:

#### 847 - L2T

Field survey at this point location indicated an elevation 0.6' lower than that interpolated from the mapping. Review of the location confirmed land cover description "L2T", long grass or crops. It was one of twenty collected in this land cover description. No systematic error or omission of data was observed during review. Analysis of the test results for this land cover type suggests that the DEM is such areas exhibit a slightly higher mean deviation with respect to the field survey elevations. In theory, the affect of the vegetation would be to influence a higher elevation in the data set as some last-return data that was classified as ground may actually be slightly elevated from the ground. Test results appear to support this idea as the average of elevation deltas is 14/100ths of a foot higher than that observed in the open land cover area.

#### 902, 903, 907, 912, 916 - L4F

Field surveys at these point locations indicated elevations between 0.74' to 0.87' lower than that interpolated from the mapping. Review of the location confirmed land cover description "L4F", forest or woodland. These were five of twenty points field surveyed in this land cover type. No systematic error or omission of data was observed during review at any of the locations. As was the case for the land cover type described above, vegetation could be expected to influence a higher elevation in the data set as some last-return data that was classified as ground may actually be slightly elevated from the ground. In forest, this could include the bottoms of trunks and debris as well as low vegetation. Analysis of the field survey test point elevations against those taken from the map data identifies this land cover type as having the lowest accuracy compared to the remainder of the project area. It exhibits the highest mean deviation, 0.37', compared to other land covers, and with a RMSE of 0.46', it is the only land cover type that does not meet or exceed the target accuracy for the overall project when examined in isolation. The result is consistent with expectations that lower accuracy might be expected in areas obscured by vegetation than open and urban land cover categories. In terms of degree to which the accuracy was affected, the result is slightly better than anticipated for this land cover type.

#### 875 - L5U

Field surveys at these point location indicated an elevation 0.61' higher than that interpolated from the mapping. Review of the location confirmed land cover description "L5U", urban. This was one of twenty points field surveyed in this land cover type. No systematic error or omission of data was identified here. No solid explanation could be determined for the elevation difference. Some higher elevations were noted in the data set within a few feet of the test point. It may be speculated that with application of the horizontal accuracy tolerance radius around the point that a better elevation match may be observed. Analysis of test results for this land cover type in isolation show the lowest mean deviation and an RMSE of 0.27', second to the open land cover type. Given the results observed for this land cover type when analyzed in isolation, confidence should remain that elevation accuracy requirements will be met or exceeded in urban areas.

#### Testing Conclusion

While MNDOT's testing for elevation accuracy showed slightly different results from our OPTIMAL's, (0.3' RMSE compared to 0.2'). Variance in testing approach account for the different results. OPTIMAL tested more points, (1,041) however a much higher proportion of points were collected in open and urban areas and no test data was collected in forested areas. OPTIMAL's testing served well as a quality control providing confidence in sensor performance. MNDOT test locations while fewer, were better distributed across the project area and provided sufficient test point information at all land cover types found in the project area, thereby providing an analysis basis for the effects of those land covers. Therefore, only the third-party MNDOT results should be used to populate any "tested accuracy" fields in the metadata.

REPORT OF CALIBRATION  
of Aerial Mapping Camera

May 17, 2005

Camera type: Wild RC30*	Camera serial no.: 5296
Lens type: Wild Universal Avigon /4-S	Lens serial no.: 13433
Nominal focal length: 153 mm	Maximum aperture: f/4
	Test aperture: f/4

Submitted by: MD Atlantic Technologies, Inc.  
Huntsville, Alabama

Reference: MD Atlantic Technologies, Inc. purchase order No. 05PO115,  
dated May 18, 2005.

These measurements were made on Agfa glass plates, 0.19 inch thick, with spectroscopic emulsion type APX Panchromatic, developed in D-19 at 68° F for 3 minutes with continuous agitation. These photographic plates were exposed on a multicollimator camera calibrator using a white light source rated at approximately 5200K.

I. Calibrated Focal Length: 153.758 mmII. Lens Distortion

Field angle:	7.5°	15°	22.5°	30°	35°	40°
Symmetric radial (um)	-2	-3	-3	-1	1	3
Decentering (um)	0	0	1	2	3	4

Symmetric radial distortion parameters	Decentering distortion parameters	Calibrated principal point
$K_0 = 0.8279 \times 10^{-4}$	$P_1 = -0.1152 \times 10^{-6}$	$x_p = -0.001 \text{ mm}$
$K_1 = -0.1193 \times 10^{-7}$	$P_2 = -0.1923 \times 10^{-6}$	$y_p = -0.009 \text{ mm}$
$K_2 = 0.3419 \times 10^{-12}$	$P_3 = 0.0000$	
$K_3 = 0.0000$	$P_4 = 0.0000$	
$K_4 = 0.0000$		

The values and parameters for Calibrated Focal Length (CFL), Symmetric Radial Distortion ( $K_0, K_1, K_2, K_3, K_4$ ), Decentering Distortion ( $P_1, P_2, P_3, P_4$ ), and Calibrated Principal Point [point of symmetry] ( $x_p, y_p$ ) were determined through a least-squares Simultaneous Multiframe Analytical Calibration (SMAC) adjustment. The x and y-coordinate measurements utilized in the adjustment of the above parameters have a standard deviation ( $\sigma$ ) of  $\pm 3$  microns.

\* Equipped with Forward Motion Compensation

(1 of 4)

III. Lens Resolving Power in cycles/mm

Area-weighted average resolution: 111

Field angle:	0°	7.5°	15°	22.5°	30°	37.5°	45°
Radial Lines	113	134	134	134	113	113	95
Tangential lines	113	134	113	113	113	95	80

The resolving power is obtained by photographing a series of test bars and examining the resultant image with appropriate magnification to find the spatial frequency of the finest pattern in which the bars can be counted with reasonable confidence. The series of patterns has spatial frequencies from 5 to 268 cycles/mm in a geometric series having a ratio of the 4th root of 2. Radial lines are parallel to a radius from the center of the field, and tangential lines are perpendicular to a radius.

IV. Filter Parallelism

The two surfaces of the Wild 525 No. 7634 filter accompanying this camera are within 10 seconds of being parallel. This filter was used for the calibration.

V. Shutter Calibration

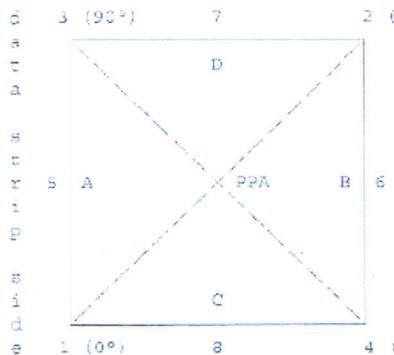

Indicated time (sec)	Rise time ( $\mu$ sec)	Fall Time ( $\mu$ sec)	% width time (ms)	Nom. Speed (sec.)	Efficiency (%)
1/125	1880	1871	8.73	1/130	87
1/250	901	891	4.25	1/270	87
1/500	464	462	2.13	1/540	87
1/1000	228	229	1.08	1/1070	87

The effective exposure times were determined with the lens at aperture f/4. The method is considered accurate within 3 percent. The technique used is described in International Standard ISO 516:1999(E).

VI. Film Platen

The film platen mounted in Wild RC30 drive unit No. 5296-569 does not depart from a true plane by more than 13  $\mu$ m (0.0005 in.).

This camera is equipped with a platen identification marker that will register "669" in the data strip area for each exposure.

VII. Principal Points and Fiducial Coordinates

Positions of all points are referenced to the principal point of autocollimation (PPA) as origin. The diagram indicates the orientation of the reference points when the camera is viewed from the back, or a contact positive with the emulsion up. The data strip is to the left.

	X coordinate	Y coordinate
Indicated principal point, corner fiducials	0.004 mm	-0.009 mm
Indicated principal point, midside fiducials	0.002	-0.006
Principal point of autocollimation (PPA)	0.0	0.0
Calibrated principal point (pt. of sym.) $x_p, y_p$	-0.001	-0.009
<u>Fiducial Marks</u>		
1	-105.993 mm	-106.007 mm
2	106.001	105.990
3	-105.994	105.989
4	106.003	-106.007
5	-111.997	-0.006
6	112.001	-0.007
7	0.000	111.992
8	0.003	-112.023

VIII. Distances Between Fiducial Marks

## Corner fiducials (diagonals)

1-2: 269.807 mm      3-4: 299.809 mm  
Lines joining these markers intersect at an angle of  $69^\circ 59' 59''$

## Midside fiducials

5-6: 223.998 mm      7-8: 234.015 mm  
Lines joining these markers intersect at an angle of  $90^\circ 00' 02''$

## Corner fiducials (perimeter)

1-3: 211.996 mm      2-3: 211.996 mm  
1-4: 211.996 mm      2-4: 211.997 mm

The method of measuring these distances is considered accurate within 0.003 mm

Note: For GPS applications, the nominal entrance pupil distance from the focal plane is 277 mm.

Saint Paul, Minnesota 55155-1899

**Christy Christensen**  
**McLeod County**  
**830 East 11<sup>th</sup> Street**  
**Glencoe, Minnesota 55336**

**Date: November 21, 2006**

In reference to: **Mn/DOT Agreement No. 90136**

Dear Mr. Christensen:

Enclosed is your executed copy of the above referenced Agreement. This Agreement is to prepare a Request for Proposal (RFP) for LiDAR and Orthophoto acquisition flights scheduled to begin in the spring of 2007.

November 20, 2006 is your authorization to proceed. Please coordinate this project with Peter Jenkins, State's Project Manager, at (651) 296-1079.

If you have any questions regarding this Agreement, please contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Ashley Hartfiel".

Ashley Hartfiel  
Contract Administrator

Project Accounting, Mail Stop 215 (2 Copies)

**STATE OF MINNESOTA  
JOINT POWERS AGREEMENT  
FOR PROFESSIONAL/TECHNICAL SERVICES**

**Project Identification:** McLeod County LiDAR and Orthophoto Project

This Agreement is between the State of Minnesota, acting through its Commissioner of Transportation ("State") and McLeod County ("Governmental Unit").

**Recitals**

1. Minnesota Statutes §15.061 authorizes State to engage such assistance as deemed necessary.
2. Minnesota Statutes §471.59 authorizes State and Governmental Unit to enter into this Agreement.
3. State is in need of the Governmental Unit to prepare a Request for Proposal (RFP) for LiDAR and Orthophoto acquisition flights scheduled to begin in the spring of 2007. This project will have countywide coverage and the Governmental Unit will be seeking partners for support of this project. State will be providing partnership dollars and some in-kind services to include surveying (test shot collection), independent accuracy report and expertise (RFP selection committee).
4. Governmental Unit may use the results of the work to create computer software products or systems, which may be protected from disclosure and sold commercially as provided by Minnesota Statutes §375.85.
5. Governmental Unit represents that it is duly qualified and agrees to perform all services described in this Agreement to the satisfaction of State.

**Agreement**

**1 Term of Agreement; Survival of Terms; Incorporation of Exhibits**

- 1.1 **Effective date:** This Agreement will be effective on the date State obtains all required signatures under Minnesota Statutes Section §16C.05, subdivision 2.
- 1.2 **Expiration date:** This Agreement will expire on **January 31, 2008**, or when all obligations have been satisfactorily fulfilled, whichever occurs first.
- 1.3 **Survival of Terms:** All clauses which impose obligations continuing in their nature and which must survive in order to give effect to their meaning will survive the expiration or termination of this Agreement, including, without limitation, the following clauses: 6. Liability; 7. State Audits; 8. Government Data Practices; 9. Intellectual Property Rights; and 10. Venue.
- 1.4 **Exhibits:** Exhibit A is attached and incorporated into this Agreement.

**2 Scope of Work and Deliverables**

*This entire scope of work falls under Activity Code 1018*

- 2.1 The Governmental Unit is planning to publish an RFP to do orthophotography and a LiDAR collection to create a Digital Elevation Model (DEM). State's cooperation in this multi-government partnership will assure State a copy of the complete data set that can be utilized by both State's Central Office and District 8. This data will be most valuable for pre-design, pre-engineering, hydraulic studies and mapping professionals. The total number of Control Sections covered partially or in whole is nine.
- 2.2 The Governmental Unit will provide the following services with respect to this Agreement:
  - The creation and publication of the RFP in accordance with Minnesota State Statutes
  - Establishment of the vendor selection committee – which will include one member designated by State
  - Project Management – from acquisition through final delivery
  - Invoice payment services to the selected vendor
  - **Data storage and dissemination**
  - Notification to State should there be an unsatisfactory response to the RFP

2.3 State will provide in-kind services to supplement this project by collecting test point data through its District 8 Surveys Office. The test point data will be within the vicinity of the Trunk Highway system throughout McLeod County. State will also provide an accuracy report and test point analysis through its Photogrammetric Unit. Should the Governmental Unit require specific areas to be tested which fall outside the Trunk Highway vicinity; the Governmental Unit will collect that data and supply it to State's Photogrammetric Unit with a request that the data be included in the accuracy report.

### 3 Payment

3.1 **Consideration.** State will pay for all services performed by Governmental Unit under this Agreement as follows:

3.1.1 **Compensation.** State will pay Governmental Unit on a Lump Sum basis. The Governmental Unit will submit an invoice, using the format set forth in Exhibit A, for work performed prior to June 30, 2007. Mn/DOT must receive this invoice prior to August 1, 2007.

3.1.2 **Total Obligation.** The total obligation of State for all compensation and reimbursements to Governmental Unit will be \$25,000.00.

### 3.2 Terms of Payment

3.2.1 **Invoices.** State will promptly pay Governmental Unit after Governmental Unit presents an invoice for the services actually performed and State's Authorized Representative accepts the invoiced services. Governmental Unit will use the format set forth in Exhibit A when submitting Invoices. Invoices must be submitted timely and according to the following schedule:  
**Prior to August 1, 2007**

3.2.2 **Retainage.** Under Minnesota Statutes Section §16C.08, subdivision 5(b), no more than 90% of the amount due under this Agreement may be paid until the final product of this Agreement has been reviewed by State's agency head. The balance due will be paid when State's agency head determines that Governmental Unit has satisfactorily fulfilled all the terms of this Agreement.

3.2.3 **Federal funds.** If federal funds are used Governmental Unit is responsible for compliance with all federal requirements imposed on these funds and accepts full financial responsibility for any requirements imposed by Governmental Unit's failure to comply with federal requirements.

3.3 **License to State.** In consideration of the monetary contribution and in-kind services provided by State, Governmental Unit will provide a license to certain data, and the DEM, as further specified in Article 9.

### 4 Agreement Personnel

4.1 State's Authorized Representative will be:

Name: Ashley Hartfiel, Contract Administrator  
Address: Minnesota Department of Transportation  
Consultant Services Section, Mail Stop 680  
395 John Ireland Boulevard, St. Paul, Minnesota 55155-1899  
Telephone: 651-296-3558  
Fax: 651-282-5127  
E-Mail: [ashley.hartfiel@dot.state.mn.us](mailto:ashley.hartfiel@dot.state.mn.us)

State's Authorized Representative, or his/her successor, will monitor Governmental Unit's performance and has the authority to accept or reject the services provided under this Agreement.

4.2 State's Project Manager will be:

Name: Peter Jenkins, Photogrammetric Engineer  
Address: Minnesota Department of Transportation  
Office of Land Management, Mail Stop 640  
395 John Ireland Boulevard, St. Paul, Minnesota 55155-1899

Telephone: 651-296-1079  
 Fax: 651-297-1521  
 E-Mail: [peter.jenkins@dot.state.mn.us](mailto:peter.jenkins@dot.state.mn.us)

State's Project Manager, or his/her successor, has the responsibility to monitor Governmental Unit's performance and progress. State's Project Manager will sign progress reports, review billing statements, make recommendations to State's Authorized Representative for acceptance of Governmental Unit's goods or services and make recommendations to State's Authorized Representative for certification for payment of each Invoice submitted for payment.

**4.3 Governmental Unit's Authorized Representative will be:**

Name: Christy Christensen, GIS Director  
 Address: McLeod County  
           830 East 11<sup>th</sup> Street, Glencoe, Minnesota 55336  
 Telephone: 320-864-3156  
 Fax: 320-864-1302  
 E-Mail: [christy.christensen@co.mcleod.mn.us](mailto:christy.christensen@co.mcleod.mn.us)

**5 Assignment, Amendments, Waiver and Contract Complete**

- 5.1 **Assignment.** Governmental Unit may neither assign nor transfer any rights or obligations under this Agreement without the prior consent of State and a fully executed Assignment Agreement, executed and approved by the same parties who executed and approved this Agreement, or their successors in office.
- 5.2 **Amendments.** Any Amendment to this Agreement must be in writing and will not be effective until it has been executed and approved by the same parties who executed and approved the Original Agreement, or their successors in office.
- 5.3 **Waiver.** If State fails to enforce any provision of this Agreement, that failure does not waive the provision or its right to subsequently enforce it.
- 5.4 **Contract Complete.** This Agreement contains all prior negotiations and agreements between State and Governmental Unit. No other understanding regarding this Agreement, whether written or oral, may be used to bind either party.

**6 Liability**

- 6.1 Governmental Unit will indemnify, save and hold State, its agents and employees harmless from any claims or causes of action, including attorney's fees incurred by State, arising from the performance of this Agreement by Governmental Unit, its agents or employees. This clause will not be construed to bar any legal remedies Governmental Unit may have for State's failure to fulfill its obligations under this Agreement.

**7 State Audits**

- 7.1 Under Minnesota Statutes §16C.05, subdivision 5, Governmental Unit's books, records, documents and accounting procedures and practices relevant to this Agreement are subject to examination by the State and/or the State Auditor or Legislative Auditor, as appropriate, for a minimum of six years from the end of this Agreement.

**8 Government Data Practices**

- 8.1 Governmental Unit and State must comply with the Minnesota Government Data Practices Act, Minnesota Statutes Chapter 13, as it applies to all data provided by State under this Agreement, and as it applies to all data created, collected, received, stored, used, maintained or disseminated by Governmental Unit under this Agreement. The civil remedies of Minnesota Statutes §13.08 apply to the release of the data referred to in this clause by either Governmental Unit or State.

## **9 Intellectual Property Rights; License to State**

**9.1 Intellectual Property Rights.** Governmental Unit will own all rights, title and interest in all of the intellectual property rights, including copyrights, patents, trade secrets, trademarks and service marks in the Works and Documents created and paid for under its contract with its contractor.

### **9.2 License**

**9.2.1 Grant.** Governmental Unit grants to State a perpetual, irrevocable, non-exclusive, non-transferable and non-assignable license to use the digital orthophotos, lidar data and DEM (collectively the "Licensed Data"). State may grant access to the Licensed Data to its employees, consultants and agents, as necessary for transportation purposes. State will not reproduce or duplicate the Licensed Data for sale licensing or distribution in any manner (except that State may make a reasonable number of backup copies for internal use) and will inform its employees, agents and consultants of such restriction. State, and its employees, agents and consultants, may combine the Licensed Data with other different data to create new and original electronic or hardcopy products that State can use without limitation.

**9.2.2 Governmental Unit's Rights in Data Limited.** Due to changes in land use, the commercial value of the Licensed Data declines over time. At a date that is five years from the date the Licensed Data was delivered to State, the Licensed Data will be deemed "Historical Data". The restrictions on the use of Licensed Data by State, as detailed in Article 9.2.1, will not apply to Historical Data.

**9.2.3 "As Is"; Non-Infringement.** The Licensed Data is provided "as is" and without representation or warranty of accuracy or completeness of the data, or fitness for a particular purpose. Governmental Unit will have no responsibility for State's use of the Licensed Data or Historical Data. Notwithstanding the foregoing, Governmental Unit represents and warrants that the Licensed Data does not infringe upon the intellectual property of another party. If the Licensed Data is determined to infringe upon the intellectual property of another party, Governmental Unit will either replace the data at issue, secure for State the right to use the data despite the infringement, or refund the money paid by State under this Agreement. Governmental Unit's indemnification obligation, as set forth in Article 6, applies to this warranty of non-infringement.

## **10 Venue**

**10.1** Venue for all legal proceedings arising out of this Agreement, or its breach, must be in the appropriate state or federal court with competent jurisdiction in Ramsey County, Minnesota.

## **11 Termination; Suspension**

**11.1 Termination.** State or the Commissioner of Administration may terminate this Agreement at any time, with or without cause, upon 30 days' written notice to Governmental Unit.

**11.2 Termination by State for Insufficient Funding.** State may immediately terminate this Agreement if it does not obtain funding from the Minnesota Legislature, or other funding source; or if funding cannot be continued at a level sufficient to allow for the payment of the services covered here. Termination must be by written or fax notice to Governmental Unit. State is not obligated to pay for any services that are provided after notice and effective date of termination. However, Governmental Unit will be entitled to payment, determined on a pro rata basis, for services satisfactorily performed to the extent that funds are available. State will not be assessed any penalty if the agreement is terminated because of the decision of the Minnesota Legislature, or other funding source, not to appropriate funds. State must provide Governmental Unit notice of the lack of funding within a reasonable time of State's receiving that notice.

**11.3 Termination by Governmental Unit for Insufficient Funding.** Governmental Unit's participation is based on a preliminary budget for fiscal year 2007. Governmental Unit may terminate this Agreement if the McLeod County Board does not appropriate sufficient funding to perform the LiDAR and Orthophotography work.

11.3 **Suspension.** State may immediately suspend this Agreement in the event of a total or partial government shutdown due to failure to have an approved budget by the legal deadline. Work performed by Governmental Unit during a period of suspension will be deemed unauthorized and undertaken at risk of non-payment.

## 12 Additional Provisions

NONE

### STATE ENCUMBRANCE VERIFICATION

Individual certifies that funds have been encumbered as required by Minn. Stat. §16A.15 and §16C.05.

Signed: J. Kille  
Date: 11-14-2006  
CFMS Contract No. A- 93712

### GOVERNMENTAL UNIT\*

Governmental Unit certifies that the appropriate person(s) have executed the Agreement on behalf of Governmental Unit as required by applicable articles, bylaws or resolutions

(Photo Control Maximum Errors: Horizontal = 0.15 ft Vertical = 0.10 ft)

Statistical Summary Of Closure Errors For All Shots:

Horizontal (200 shots): Mean = 0.022 Std. Deviation = 0.026

Vertical (200 shots): Mean = 0.038 Std. Deviation = 0.047

\* Mean Point Errors Over Photo Max: Horizontal = 0 Vertical = 3

## APPENDIX A

NMAS Equivalent Contour Interval	NSSDA RMSE(z)	NSSDA Accuracy (z)	Required Accuracy for Reference Data for "Tested to Meet"
0.5	0.15 ft or 4.60 cm	0.30 ft or 9.10 cm	0.10 ft
1	0.30 ft or 9.25 cm	0.60 ft or 18.2 cm	0.20 ft
2	0.61 ft or 18.5 cm	1.19 ft or 36.3 cm	0.40 ft
4	1.22 ft or 37.0 cm	2.38 ft or 72.6 cm	0.79 ft
5	1.52 ft or 46.3 cm	2.98 ft or 90.8 cm	0.99 ft
10	3.04 ft or 92.7 cm	5.96 ft or 181.6 cm	1.98 ft

**Table 1 Comparison of NMAS/NSSDA Vertical Accuracy**

NMAS Mp Scale	NMAS CMAS 90%	NSSDA RMSE(r)	NSSDA Accuracy (r) 95% confidence level
1" = 100' or 1:1, 200	3.33 ft	2.20 ft or 67.0 cm	3.80 ft or 1.159 m
1" = 200' or 1: 2, 400	6.67 ft	4.39 ft or 1.339 m	7.60 ft or 2.318m
1" = 400' or 1: 4, 800	13.33 ft	8.79 ft or 2.678 m	15.21 ft or 4.635 m
1" = 500' or 1: 6,000	16.67 ft	10.98 ft or 3.348 m	19.01 ft or 5.794 m
1: = 1000' or 1: 12, 000	33.33 ft	21.97 ft or 6.695 m	38.02 ft or 11.588 m
1" = 2000' or 1: 24, 000*	40.00 ft	26.36 ft or 8.035m	45.62 ft or 13.906 m

**Table 2 Comparison of NMAS/NSSDA Horizontal Accuracy**
